Mission Statement for the Science & Technology Group

Science and Technology Group (STG) is a 501 (c) (3) non-profit corporation founded in November 2001 to promote technology education for K-12 youth through experiential learning and partnerships with workplace technical professionals, primarily scientist and engineers. STG is principally a catalyst organization that provides infrastructure, training, and other support to facilitate volunteer technical professionals in their interaction with students in a defined area of service.

Mission & Goals

The current objective of this organization is simple: get students excited about science, math, and technology. We will accomplish this via the competitive programs offered by FIRST (For Inspiration and Recognition of Science and Technology) program. In the future, the Science and Technology Group may be adding other programs besides FIRST.

STG's Strategic Objectives

- Create and foster excitement for science and technology in K-12 youth through competitive science activities modeled after athletic competitions.
- Use science competitions as a vehicle to involve volunteer technical professionals in the education process.
- Develop inquiry-based curriculum based on the concepts used in the competitions, in order to reach all students and enable systemic change in science and technology education.
- Reach out to all segments of the student population who are underrepresented in science and technology.

People

STG is a volunteer organization in which many people and organizations devote a large amount of time to STG's activities. The strength of STG is the volunteers.
